7x Portfolio Hydroelectric Power Plants in Italy with 20 Years PPA [19GWh]

Renewable energy has developed rapidly in Italy over the past decade and provided the country a means of diversifying from its historical dependency on imported fuels.

All 8,047 Italian municipalities have deployed some source of renewable energy, with hydroelectric power being the leading renewable energy source in terms of production. Bio energy, wind power and geothermal power also make an important contribution to national energy demands.

Italy has implemented generous incentive schemes to encourage the development of renewable energy production. Its largest scheme incentivised solar PV production and lead Italy from a low base of installed PV in 2010 to become the world's fourth largest country by installations by the end of 2014, ahead of the US at that time.

All sources of renewable energy have grown in Italy during recent years and many continue to receive incentives. In the last decade, Italy has become one of the world's largest producers of renewable energy, ranking as the second largest producer in the European Union and the ninth in the world.
